

Investor Pitch Deck — 2026 | Pre-revenue · MVP Stage

ResilienceOS

Open-source resilience simulation platform for cyber, AI governance, and operational readiness. Continuous evidence, not annual checkboxes.

Vulns in Prod Deps

1

Minute to First Exercise

github.com/iamprbkr/ResilienceOS

THE PROBLEM

Compliance is measured in **binders and billable hours**, not readiness.

Organizations spend \$150k–\$400k per year on GRC tools and tabletop exercises.

They still cannot answer one question: **Are we more resilient than last quarter?**

\$

\$25k–\$75k

Per tabletop exercise with a consultancy. Most run only 1–2 per year. No score, no trend, no improvement tracking.

!

8+

Major regulatory frameworks now cover AI governance. Organizations lack tools to test AI-specific controls under pressure.

~

2–4 wks

To compile a board report. By the time it is ready, the data is stale. Boards get binders, not live readiness scores.

Fragmented tools. GRC platforms track controls but never test them. Cyber ranges test technical controls but exclude executives. AI governance has no dedicated testing tool at all.

One platform. Unlimited exercises. **Measurable readiness.**

ResilienceOS replaces the annual consultancy cycle with continuous, adaptive simulation. Every exercise produces a score that trends over time. Every decision maps to regulatory frameworks. Every report exports as auditor-ready evidence.

01

Adaptive Injects

Scenarios react to decisions made during the exercise. Choose to contain rather than pay? The next inject tests your containment procedures. No two runs produce the same outcome.

02

Standards Mapping

Every exercise maps to NIST CSF 2.0, ISO 27001, SOC 2, MITRE ATT&CK, MITRE ATLAS, AI RMF, ISO 42001, and DORA. Coverage reports show gaps across frameworks simultaneously.

03

Evidence Factory

After-action reports generate as PDF, DOCX, or CSV. Board-ready evidence from live simulation, not self-assessment. Audit trail with search and filters.

04

Multi-Tenant SaaS

RBAC with 15 roles and 5 permissions. 15 workspace views: Command, Tabletop, Scenarios, Threat AI, Training, Standards, Reports, Admin, and more. Light and dark mode.

PRODUCT CATEGORIES

Four exercise families covering **the full market**

Each category targets a specific buyer with a distinct buying trigger.

D

Dynamic Tabletop

Adaptive injects react to decisions. Every run is unique. CISOs who have run the same ISO 27001 tabletop for five years get fresh challenges every time.

S

Sector-Specific

Healthcare, financial services, energy, government, tech, insurance, retail, manufacturing. Each sector has pre-built exercises mapped to its regulations.

T

Threat & Risk Specific

Ransomware, AI model poisoning, nation-state, insider threat, supply chain, cloud breach, fraud, privacy. Pick the risk keeping you up at night.

G

GRC Evidence

Test controls under pressure. Map results to frameworks. Export auditor-ready evidence. Bridges audit preparation and live exercises.

MARKET OPPORTUNITY

Three tailwinds create a **\$12B+** addressable market

R

\$8.2B

GRC platform market by 2027 (Grand View Research). Growing 12.5% CAGR. Existing platforms track controls but do not test them.

A

\$3.5B

Cyber exercise and tabletop market. Currently dominated by consultancies charging \$25k–\$75k per engagement with no SaaS alternative.

G

\$1.2B

AI governance and testing market (emerging). DORA, EU AI Act, and ISO 42001 create mandatory testing requirements that no incumbent tool satisfies.

Timing is everything. DORA enforcement began January 2025. EU AI Act enforcement phases start 2025–2026. NIST CSF 2.0 added AI governance. Every one of these regulations demands evidence of tested controls, not just documented policies.

COMPETITIVE LANDSCAPE

Nobody does **all four**. 108 YC security startups confirm a blue ocean.

	CONSULTANCY	GRC PLATFORMS	CYBER RANGES	YC AI SECURITY	RESILIENCEOS
Adaptive exercises	X	X	✓	X	✓
Standards mapping	X	✓	X	X	✓
Org readiness scoring	X	X	X	X	✓
Board-ready evidence	✓	✓	X	X	✓
Per-exercise cost	\$25k–\$75k	\$50k–\$200k/yr	\$10k–\$50k/yr	\$1k–\$10k/mo	\$0–\$999/mo

108 YC security startups (2025-26) fundraised — **zero** build organizational resilience simulation. The entire cohort does code-level AI pentesting, agent auth, and runtime protection. Blue ocean.

18-24 month window. YC entrants need time to pivot into this space. Regulatory tailwinds (DORA, EU AI Act) create urgency now. First-mover advantage matters.

WHO BUYS

Five buyers, one platform, unified sale

C

CISO

Needs to prove readiness improves YoY. Buys unlimited exercises and trending scores. Budget: \$50k–\$200k annually.

G

GRC Manager

Auditors want evidence, not control registers. Buys after-action reports mapped to frameworks. Budget: \$20k–\$100k.

B

Board Member

Fiduciary duty for cyber and AI oversight. Buys trend data and gap analysis. Budget: part of annual risk budget.

A

AI Governance Lead

No tool exists for AI RMF or ISO 42001 testing. Buys AI-specific scenarios. Budget: emerging, \$30k–\$100k.

T

Third-Party Risk Lead

Cannot verify vendor IR without a real breach. Buys vendor-specific scenarios. Budget: \$15k–\$50k.

Average deal size:

\$35k–\$120k

across all personas

REVENUE MODEL

Five streams, **\$72M+** ARR at scale

SaaS Subscriptions

**\$199–
Custom/mo**

Core revenue. Team, Business, Enterprise tiers. Self-hosted Community tier drives adoption.

Scenario Marketplace

\$499/pack

Premium sector packs: financial services, healthcare, energy, AI governance. All Sector Bundle at \$1,999.

Professional Services

**\$2.5k–
\$25k**

Custom scenario authoring, annual exercise programs, GRC integration setup, white-label licensing.

White-Label MSP

**\$25k/yr +
\$5/seat**

Consultancies and MSSPs rebrand and resell to their clients. Multi-tenant management included.

Insurance

Per-policy fee

Carriers pay per-policyholder for readiness scores and exercise completion evidence. Premium discount integration.

RECOMMENDED

\$0 /mo

Community

Self-hosted, unlimited exercises, 15 workspaces, 8 frameworks

- ✓ Unlimited exercises
- ✓ 8 framework mappings
- ✓ Self-hosted (Docker)

\$999 /mo

Business

Cloud-hosted, 500 users, all packs, SSO, priority support

- ✓ All sector scenario packs
- ✓ SSO/SAML integration
- ✓ Priority support
- ✓ Up to 500 users

Custom

Enterprise

Dedicated cloud or on-premise, unlimited users, professional services

- ✓ Dedicated instance
- ✓ Custom scenario authoring
- ✓ GRC integration
- ✓ SLA guarantees

Pre-revenue. Working product. Enterprise-grade foundations.

Zero paying customers. Deployable, security-audited, CI-ready platform. The fastest path from zero to first \$1 is open-source adoption, not a sales team.

Security Audit Completed

Seven critical and high-severity findings fixed. Zero known vulnerabilities in production dependencies. Full report: docs/SECURITY_AUDIT_REPORT.md

Complete Documentation

User guide, admin manual, API reference, architecture docs, deployment checklist, product-market fit analysis, security audit report, V2.0 roadmap — 22 documents.

Production Infrastructure

Docker multi-stage build. Render blueprint. Railway config. Vercel frontend config. GitHub Actions CI with build, self-test, dependency audit, and smoke test.

Open Source Core

Community edition on GitHub. Deployable in under one minute. Zero vendor lock-in. Enterprise features as upsell. PLG motion through GitHub discovery.

Go-to-market: \$0 CAC through open source. Security engineers discover ResilienceOS on GitHub. They self-host the community edition. When their organization needs SSO, sector packs, or enterprise support, they buy. Zero outbound sales required for first 100 users.

Raising **\$500k** to reach product-market fit velocity

1

Content Engine (\$200k)

Build sector-specific scenario packs for all 8 target industries.
Hire SMEs for financial services, healthcare, and energy packs.
Launch scenario marketplace.

3

Go-to-Market (\$100k)

CISO community sponsorships, compliance webinar series,
scenario template lead magnets, partner program for
consultancies.

2

Enterprise Features (\$150k)

SSO/SAML, Redis-backed rate limiting, password hashing or
IdP integration, WebSocket auth finalization. Close enterprise
deals.

4

Operations (\$50k)

Cloud infrastructure, compliance certifications (SOC 2), legal,
accounting. 18-month runway.

ROADMAP

Three phases from pre-revenue to \$2M ARR

V1

V1.0 — Foundation (Complete)

15 workspaces, 8 frameworks, security audit done. CI/CD pipeline. Docker + Render deploy.

Community edition on GitHub. Zero paying customers. PLG foundation laid.

V2

V2.0 — First Revenue

Sector packs, scenario marketplace, SSO/SAML, content admin panel.

Target: 100 paying customers. \$500k ARR.
SOC 2 Type I. First 10 via GitHub community upsell.

V3

V3.0 — Platform

AI-assisted scenario authoring, cross-tenant analytics, API marketplace, insurance channel.

Target: 500 customers. \$2M ARR.
Marketplace + insurance = 20% of revenue.

NOW

\$0 ARR

Pre-seed. MVP complete. Seeking \$500k.

12 MONTHS

\$500k ARR

~85 customers at \$999/mo Business tier

24 MONTHS

\$2M ARR

70% SaaS, 15% marketplace, 10% services, 5% insurance

JOIN US

The compliance industry is ready for a reckoning

Annual binders are not resilience. Continuous, measured, verifiable readiness is the standard the market needs and regulators are demanding.
